

7-Day Job Search Roadmap

A simple week plan for applying with structure instead of panic-scrolling.

Day 1: Clean the base

- Create one master resume and one role-specific version.
- Fix LinkedIn headline, location, email, and featured project links.
- Make a spreadsheet with company, role, link, status, date, and follow-up date.

Day 2: Pick target roles

- Choose 2 role families only. Example: frontend fresher and support engineer.
- Collect 20 job descriptions and highlight repeated skills.
- Update resume keywords honestly based on repeated requirements.

Day 3: Apply with focus

- Apply to 10 roles where you match at least 50 percent.
- Write a short custom note for each role.
- Track every application. Memory is not a CRM.

Day 4: Proof of work

- Improve one project README.
- Add screenshots, demo link, or a short case-study paragraph.
- Post one useful LinkedIn update about what you built or learned.

Day 5: Outreach

- Message 10 people politely: alumni, employees, recruiters, founders.
- Ask for guidance or referral only after showing the exact role link.
- Keep it short. Nobody signed up for your autobiography.

Day 6: Interview prep

- Practice 10 HR questions and 10 role questions aloud.
- Record yourself once. Painful, but useful.
- Prepare 3 stories: project, failure, teamwork.

Day 7: Review and repeat

- Check what got responses and what got ignored.
- Improve resume, project, or targeting based on evidence.
- Repeat weekly. Random effort gives random results.

Use this as a starting point. Customize answers and resumes for the exact role. If it sounds copied, it probably is.
